

Prayog India -- Complete E-Commerce, Store, Inventory, Sales & Business Management Platform

****Prepared By:**** Global Webify\

****Project:**** Prayog India -- Next.js Web + Flutter Android/iOS App + Admin Panel + Store/Walk-in POS + Inventory & Business Management\

****Document Type:**** Complete Functional & Technical Scope

1. Executive Summary

Prayog India will be developed as a centralized commerce and business-management ecosystem covering:

- Responsive Next.js e-commerce website
- Flutter Android & iOS customer application
- Centralized backend API
- Next.js Admin Panel
- Store/Walk-in Shopping & POS functionality
- Centralized product catalogue
- Multi-location inventory management
- Purchase and supplier management
- Online, B2B, B2C and walk-in sales
- Quotation, Proforma Invoice and Tax Invoice management
- Advanced sales and profit reporting
- Sales executive attribution and incentive management
- Product, category, subcategory and bulk-edit management
- Shipping and logistics rules based on weight, freight mode and product restrictions
- WhatsApp, email and push notifications
- Learning Hub and Services sections
- Customer rewards/loyalty and community opt-in
- SEO, analytics, reporting and business dashboards

The architecture is designed around Prayog India's current Ranchi Main Branch and future expansion into multiple physical stores.

Core Inventory Principle

****Ranchi Main Branch will act as the Central Inventory for Website, Mobile App and Ranchi Store sales. Each additional physical store will maintain its own independent inventory.****

The product catalogue remains centralized, while stock quantity is location-specific.

2. Business & Platform Structure

2.1 Sales Channels

The platform will support:

1. Website sales
2. Mobile App sales
3. Ranchi walk-in/store sales
4. Future store walk-in sales
5. B2C sales
6. B2B sales
7. Sales Executive-assisted sales
8. Quotation-based institutional sales

2.2 Customer Types

The system will support:

- B2C Customer
- B2B Customer
- Walk-in Customer
- Registered Customer
- Guest Customer

Customer type can be used for pricing, promotions, invoices, reports and applicable rewards.

3. Website Main Menu & Information Architecture

The website primary navigation will include:

Home

About

Services

- STEM Lab Setup
- Robotics Lab Setup
- Drone Lab Setup
- Industrial Projects
- Consultancy

Products / Shop

- Product Categories
- Brands
- Featured Products
- New Arrivals
- Best Sellers
- Deals & Offers
- Learning / Project Products

Contact Us

Careers

Account

- Sign In
- Register
- Store / Walk-in Shopping

Important Walk-in Rule

Walk-in functionality will be primarily available through an authorized store device/tablet assigned to a physical store. It should not function as an unrestricted public registration form.

This prevents fake walk-in records and keeps walk-in sales tied to an actual store.

4. Homepage

The homepage will be completely redesigned with a modern, premium and immersive shopping experience.

Homepage Sections

- Premium hero banner
- Promotional campaigns
- Shop by Category
- Featured Categories
- Trending Products
- New Arrivals
- Best Sellers
- Recommended Products
- Deals & Offers
- Robotics Kits
- Arduino & Development Boards

- Sensors & Modules
 - Motors & Drivers
 - Electronic Components
 - Educational Kits
 - Project Kits
 - Industrial Automation Products
 - Recently Viewed Products
 - Learning / Training section
 - Why Choose Prayog India
 - Customer Reviews
 - Brand Partners
 - Blog / Knowledge Centre
 - Newsletter subscription
 - WhatsApp support
 - Important notification/announcement slider
 - Footer with complete navigation
-

5. Important Website Notification Slider

An administrator will be able to publish important announcements at the top of the website.

Examples:

- > Website Under Maintenance
- > Shipping may be delayed due to high order frequency.
- > Festival Sale Live Now
- > Delivery timelines may vary for selected locations.

Admin Controls

- Create notification
 - Edit notification
 - Enable/disable
 - Schedule start date/time
 - Schedule end date/time
 - Priority
 - Display order
 - Link to page/product/category if required
-

6. About, Learning Hub, Services, Contact & Careers

About

Admin-managed About Us content with:

- Company information
- Vision
- Mission
- Why Prayog India
- Brand information
- Team/company sections where required

Services

STEM Lab Setup

Robotics Lab Setup

Drone Lab Setup

Industrial Projects

Consultancy

Each service can contain:

- Banner
- Description
- Features
- Applications
- Gallery
- Enquiry CTA
- Contact/WhatsApp CTA

Contact Us

- Contact details
- Contact form
- Map/location
- Email
- Phone
- WhatsApp

Careers

- Job listing

- Job details
 - Apply form
 - Resume upload
 - Application management in Admin
-

7. Product Catalogue

The catalogue will be optimized for a large inventory.

Category System

- Multi-level categories
- Parent categories
- Subcategories
- Nested categories
- Category banners
- Category descriptions
- Category-specific attributes
- SEO-friendly category URLs

Example:

Electronics

- Electronic Components
- Resistors
- Capacitors
- ICs
- LEDs
- Relays

Robotics

- Robot Kits
- Motors
- Motor Drivers
- Sensors
- Wheels
- Controllers

The existing broad product catalogue can support areas such as:

- Arduino
- Raspberry Pi
- Cameras
- Batteries
- Connectors
- Hardware

- Development Boards
 - Mechanical Products
 - Sensors
 - IoT
 - 3D Accessories
 - Educational Toys
 - Robotics Accessories
 - Drone Technology
 - STEM Kits
 - Industrial Automation
-

8. Product Management

Admin/Store Manager can manage:

- Product name
 - SKU
 - Brand
 - Category
 - Subcategory
 - Product description
 - Features
 - Applications
 - Technical specifications
 - Product images
 - Product videos
 - 360° media where required
 - Datasheet
 - Manual
 - Downloadable documents
 - MRP
 - Selling price
 - Discount
 - GST
 - Product variants
 - Product weight
 - Dimensions
 - Shipping information
 - Related products
 - Frequently bought together
 - Recommended accessories
 - Product shipping tags
 - Stock
 - Publish/unpublish status
-

9. Product Variations

Products can support:

- Size
- Voltage
- Color
- Pack quantity
- Model
- Variant
- Specification

Each variant can have its own:

- SKU
 - Price
 - Stock
 - Images
 - Specifications
 - Weight
 - Shipping restrictions
-

10. Advanced Product Search

Search will be one of the core features.

Search

- Instant search
- Product suggestions
- SKU search
- Product name search
- Brand search
- Category search
- Attribute search
- Technical specification search
- Search history
- Popular searches
- Recently searched products
- Typo-tolerant search

Filters

- Category
- Subcategory

- Price
- Brand
- Availability
- Rating
- Discount
- Product attributes
- Technical specifications
- Voltage
- Current
- Size
- RPM
- Compatibility
- Material
- Application

Filters should dynamically change based on the selected category.

11. Product Listing Page

Product cards will display:

- Product image
- Product name
- SKU
- Short specifications
- MRP
- Selling price
- Discount
- GST information
- Stock status
- Rating
- Wishlist
- Quick View
- Add to Cart
- Buy Now

Sorting

- Relevance
- Newest
- Price Low → High
- Price High → Low
- Popularity
- Best Selling
- Highest Rated
- Discount

12. Product Detail Page

Product detail page will include:

- Multiple product images
- Image zoom
- Product video
- 360° media where required
- Product title
- SKU
- Brand
- Price
- MRP
- Discount
- GST-inclusive price
- Stock availability
- Technical specifications
- Product description
- Features
- Applications
- What's included
- Datasheet
- Manual
- Downloadable documents
- Related products
- Frequently Bought Together
- Similar products
- Recommended Accessories
- Customer reviews

13. Related Products & Recommendations

Manual Related Products

Admin can manually select related products while creating/editing a product.

Example:

Arduino UNO

Related Products:

☒ GPS Module

- ☑ Telemetry Kit
- ☑ Power Module
- ☑ LiPo Battery

Admin Product Relationship Modules

- Related Products
 - Frequently Bought Together
 - Recommended Accessories
 - Similar Products
 - Recently Viewed
 - Trending Products
 - Best Sellers
 - Personalized Recommendations
-

14. Out-of-Stock & WhatsApp Availability

When a product is in stock:

- Add to Cart
- Buy Now

When a product is out of stock:

****Out of Stock****

****\ [Ask Availability on WhatsApp] ****

Example pre-filled message:

- > Hi Prayog India, I am interested in \[Product Name\] (SKU: XXXXX).
- > Please let me know the availability and latest price.

The backend can integrate with WhatsApp Business Platform/API for automated business notifications.

For customer-initiated conversations, WhatsApp can open with a pre-filled message.

15. Wishlist

Customers can:

- Add products
- Remove products
- View wishlist
- Move wishlist item to cart

Wishlist activity can also be used for customer insights and recommendations.

16. Shopping Cart

Cart Features

- Add/remove products
 - Quantity management
 - Variant selection
 - Stock validation
 - Price calculation
 - Discount calculation
 - GST calculation
 - Coupon application
 - Shipping calculation
 - Guest cart
 - Logged-in cart
 - Merge guest cart after login
 - Reward point redemption
 - Customer-type promotional pricing
 - Delivery method selection
 - Shipping restriction validation
-

17. Checkout

Optimized one-page checkout.

Customer Information

- Name
- Mobile
- Email
- Billing address
- Shipping address

- GST details
- Company name
- GSTIN

Address

- Multiple addresses
- Add/edit/delete
- Default address
- PIN-code validation

Payment

Online checkout can support:

- Razorpay / required gateway
- UPI
- Credit Card
- Debit Card
- Net Banking
- Wallets
- COD if applicable

Checkout Summary

- Order summary
- Coupon
- Shipping charge
- Tax
- Reward points
- Total amount
- Payment status
- Order confirmation

18. Customer Registration

Registration fields:

- Name
- Mobile Number
- Email
- Password
- Confirm Password

Registration Benefits

- Order Tracking
 - Wishlist
 - Saved Addresses
 - Reward Points
 - Previous Orders
 - Faster Checkout
-

19. Customer Login & Authentication

Login options:

- Mobile / Email
- Password
- Forgot Password
- Login Button
- Login with Google
- Login with OTP

Authentication will use secure authentication mechanisms and role-aware access control.

20. Customer Account

After login, the account menu will show:

Hello, Enamul

My Profile
My Orders
Wishlist
Saved Address
Support Tickets
Reward Points
Logout

My Profile

- Name
- Mobile
- Email
- Company information
- GST information
- Customer type

My Orders

- Order history
- Order details
- Payment status
- Shipment status
- Invoice
- Return/refund
- Reorder

Support Tickets

- Create ticket
- View tickets
- Reply
- Status
- Admin response

21. Customer Order Management

Customer can:

- View order
- Track order
- View payment status
- Download invoice
- Cancel order where eligible
- Request return
- Request replacement
- Request refund
- Contact support
- WhatsApp support

Order Timeline

Order Placed

Payment Confirmed

Processing

Packed

Shipped

Out for Delivery

Delivered

22. Rewards & Loyalty Points

The platform will support a loyalty/reward-points system.

Features

- Earn points based on configured rules
- View available points
- View points history
- Redeem points during checkout
- Admin-configurable redemption rules
- Customer-type eligibility rules
- Expiry rules where required
- Manual adjustment by authorized admin

Checkout

A customer can choose to apply available loyalty points at checkout, subject to configured rules.

23. Customer-Type Promotional Codes

Promo codes should be configurable for different customer types.

Examples:

- B2B-only coupon
- B2C-only coupon
- Walk-in-only coupon
- Registered-customer coupon
- New-customer coupon

Admin can define:

- Coupon code
- Discount type
- Percentage/flat value
- Minimum order value

- Maximum discount
 - Customer type
 - Category/product applicability
 - Usage limit
 - Expiry
 - User-specific restriction
-

24. Online Delivery Rules

Standard Delivery

****Free Delivery over ₹2,000/-****

Standard shipping timeline:

****7--10 days****

Ranchi Delivery

Delivery within Ranchi City:

****Within 24 Hours****

subject to product availability, order processing time and operational serviceability.

Faster Delivery

An additional faster delivery option can be offered on a chargeable basis.

Charges can depend on:

- Product/order weight
 - Delivery zone
 - Freight mode
 - Courier partner
 - Service availability
-

25. Shipping & Logistics Module

Shipping will support integrations such as:

- Shiprocket

- Delhivery
- Xpressbees
- Other providers based on client requirement

Features

- Shipping rate calculation
- PIN-code serviceability
- Shipment creation
- AWB generation
- Courier selection
- Tracking
- Shipping label
- Delivery status
- Cancellation
- Shipment tracking

26. Product Shipping Configuration

While adding/editing a product:

,

Product Name

SKU

Weight (grams)

GST %

Category

Subcategory

Freight Mode

☒ Air Freight

☒ Surface Freight

☐ Local Pickup

...

Shipping Tags

- Standard Product
- Battery Product
- Fragile Product
- Heavy Product
- Oversized Product

Additional Product Shipping Fields

- Weight

- Length
 - Width
 - Height
 - Allowed Freight Modes
 - Hazardous Item
 - Battery Product
 - Fragile Item
 - Dangerous Goods
-

27. Air/Surface Freight Rules

Example:

Arduino UNO

Weight: 50 gm

- Air Freight: Allowed
- Surface Freight: Allowed

LiPo Battery

Weight: 250 gm

- Air Freight: Not Allowed
 - Surface Freight: Allowed
-

28. Shipping Charge Calculation

Shipping charge can be calculated using:

- Total weight
- Shipping zone
- Courier partner
- Shipping mode
- Product restrictions

Example:

``` text

0 – 500 gm      ₹80

500 gm – 1 Kg   ₹120

1 Kg – 2 Kg     ₹180

```

The actual rate table will be configurable.

29. Shipping Restriction Validation

Example cart:

- Pixhawk Flight Controller
- LiPo Battery
- Propeller Set

The system detects the battery.

Customer popup:

- > ⚠ Shipping Restriction\
- > Battery products cannot be shipped via Air Freight.\
- > Please select Surface Mode for delivery.

Automatic Restriction

If any restricted product exists:

``` text

Shipping Method

✗ Air Freight – Unavailable

✓ Surface Freight

```

Reason:

- > Contains Battery Products
-

30. Mixed Cart Shipping Logic

Example:

Arduino UNO

Pixhawk

GPS Module

LiPo Battery

Because the cart contains a battery:

****Entire order → Surface Freight Only****

The system must validate the complete cart before allowing shipment selection or shipment booking.

31. Order Shipping Information

Admin Order Dashboard can show:

- Order No
- Weight
- Courier Type
- Air / Surface
- Restricted Item
- YES / NO
- Shipping provider
- AWB
- Tracking status
- Delivery status

This helps prevent invalid courier bookings and battery shipment rejection.

32. Walk-in Store Shopping

Walk-in shopping is designed specifically for customers physically present inside a Prayog India store.

It should be accessed through an authorized tablet/device assigned to the store.

Store Shopping Mode

Customer/staff can:

- Browse products
- Search products
- Search SKU
- View product details
- Check store availability
- Select quantity
- Add to cart
- Review cart

- Checkout
- Complete payment
- Receive order/invoice

33. Walk-in Customer Checkout

Walk-in checkout collects:

``` text

Name \*

Mobile Number \*

Do you require a B2B Invoice?

( ) YES

( ) NO

```

If YES:

``` text

Company Name \*

GST Number \*

Company Address \*

Contact Person

Email

```

Then:

``` text

Product Categories

↓

Product Selection

↓

Cart

↓

Payment

↓

Tax Invoice

```

The order is marked:

****Order Source: WALK-IN****

and stores:

****Store: Ranchi / Patna / Delhi / etc.****

34. Walk-in Payment Methods

Payment screen:

``` text

Select Payment Method

- CASH
- UPI
- CARD
- BANK TRANSFER
- SPLIT PAYMENT

```

Split Payment

This is a required feature.

Example:

Order Value: ₹2,000

Cash: ₹1,000

UPI: ₹500

Card: ₹500

Total: ₹2,000

```

The system must record every payment component separately while maintaining one order and one invoice.

---

## # 35. Walk-in Invoice Generation

Invoice should include:

- Invoice Number
- Date
- Customer Name
- Mobile Number

- Company Name where applicable
- GSTIN where applicable
- Items
- Quantity
- Price
- Discount
- GST
- Total
- Payment method
- Split payment details where applicable
- Store
- Sales Executive where applicable

## ## Invoice Actions

- Print Invoice
- WhatsApp Invoice
- Email Invoice
- Download Invoice

-----

## # 36. PRAYOG INDIA Community Opt-In

After a walk-in purchase, the system can ask:

> Would you like to join PRAYOG INDIA Community?

\*\*\[ Yes \]\*\*

If the customer opts in, they can receive updates about:

- Internship updates
- Workshop updates
- New product launches
- Drone training announcements
- Learning Hub updates
- Other approved promotional communications

This creates a useful customer database while keeping consent-based communication.

-----

## # 37. Multi-Store Inventory Architecture

The inventory will be divided into:

### ## Ranchi Main Branch -- Central Inventory

Used for:

- Website orders
- Mobile App orders
- Ranchi physical-store sales

There is no separate online inventory.

Example:

```
``` text
Ranchi Inventory = 100
```
```

The same 100 units are available for online and Ranchi store sales.

### ## Other Physical Stores

Each additional store has independent inventory.

Example:

```
``` text
Ranchi Main Branch = 100
Patna Store        = 20
Delhi Store         = 15
Mumbai Store        = 10
```
```

A Patna sale reduces Patna stock only.

An online sale reduces Ranchi stock.

A Ranchi walk-in sale reduces Ranchi stock.

-----

## # 38. Store Shopping Device Assignment

Each tablet/device is linked to a specific store.

Example:

Ranchi Tablet

→ Ranchi Main Branch

→ Ranchi Inventory

Patna Tablet

→ Patna Store

→ Patna Inventory

The system records the store against every walk-in transaction.

---

### # 39. Product Catalogue vs Location Inventory

Product information is centralized:

- Product Name
- SKU
- Product Images
- Description
- Specifications
- Brand
- Variants
- Product Documents
- Pricing rules

Stock remains location-specific.

Example:

ESP32 Development Board

SKU: ESP32-001

Ranchi Stock: 100

Patna Stock: 20

Delhi Stock: 15

---

### # 40. Inventory Management

#### ## Inventory Menu

Inventory

- Stock Management
- Stock Adjustment
- Purchase Entries
- Purchase History
- Supplier Management
- Stock Transfers
- Stock Reports

## ## Stock Management

- Stock quantity
- SKU-level stock
- Variant inventory
- Location-specific stock
- Reserved stock
- Sold stock
- Low-stock threshold
- Low-stock alerts
- Out-of-stock status
- Inventory history

---

## # 41. Automatic Stock Logic

When an order is placed:

Available Stock

Reserved Stock

Sold Stock

When stock reaches zero:

**\*\*Product automatically becomes Out of Stock\*\***

and:

**\*\*Add to Cart → Ask Availability on WhatsApp\*\***

The inventory transaction must identify:

- Product
- SKU
- Variant

- Location
  - Source channel
  - Order
  - Quantity
  - User/executive
  - Timestamp
- 

## # 42. Stock Adjustment

Authorized users can adjust stock for:

- Damaged goods
- Lost goods
- Physical count correction
- Returns
- Internal consumption
- Manual correction

Every adjustment should create an audit/history record with:

- Product
  - Previous stock
  - Adjustment quantity
  - New stock
  - Reason
  - User
  - Date/time
- 

## # 43. Purchase & Supplier Management

### ## Purchase Menu

Purchase Management

- └─ Purchase Entries
- └─ Purchase History
- └─ Suppliers
- └─ Supplier Reports

### ## Purchase Entry Fields

Product Name  
Current Stock

Purchase Quantity  
Purchase Price  
Supplier  
Invoice No.  
Purchase Date  
[Update Stock]

Example:

Current Stock = 125  
Purchase Quantity = 50  
Final Stock = 175

Every purchase creates a purchase-history record.

---

#### # 45. Purchase Price History

Inside Product Details:

Arduino UNO

Purchase Price History

| Date      | Qty | Price |
|-----------|-----|-------|
| 01-Jan-26 | 100 | ₹280  |
| 15-Mar-26 | 50  | ₹295  |
| 20-Jun-26 | 100 | ₹310  |
| 11-Aug-26 | 50  | ₹320  |

This allows management to track supplier price changes over time.

---

#### # 46. Product Cost & Margin Analysis

Example:

Current Purchase Price = ₹320  
Selling Price = ₹450  
Profit = ₹130  
Margin = 28.89%

The system can use purchase-cost records to calculate profitability.

---

## # 47. Bulk Product Management

### ## Menu

#### Catalog Management

- |— Products
- |— Categories
- |— Subcategories
- |— Bulk Price Update
- |— Bulk Discount Update
- |— Bulk GST Update
- |— Bulk SKU Update

Bulk editing must support category/subcategory filtering.

### ## Bulk Operations

- Bulk selling-price update
- Bulk MRP update
- Bulk discount update
- Discount percentage update
- Bulk GST rate update
- Bulk SKU update
- Bulk category update
- Bulk product update
- Bulk stock update where permitted

Business use cases:

- Launch category-wide offers
- Increase prices after supplier cost changes
- Update GST across products
- Standardize SKU codes
- Run seasonal promotions

---

## # 48. Sales Documents Module

The system will support:

#### Sales Documents

- |— Quotations
- |— Tax Invoices

## ## Recommended Workflow

Quotation

Convert to Proforma Invoice

Payment Received

Generate Tax Invoice

---

## # 49. Quotation Management

Quotations are especially important for:

- Schools
- Colleges
- Universities
- STEM Labs
- Corporate customers
- Industrial customers
- Government/tender orders

## ## Quotation Fields

- Quotation Number
  - Quotation Date
  - Valid Until Date
  - Customer Name
  - Customer Mobile
  - Customer Email
  - Company Name
  - GST Number
  - Billing Address
  - Shipping Address
  - Product items
  - Quantity
  - Price
  - Discount
  - GST
  - Shipping
  - Total
  - Notes
  - Terms and Conditions
-

## # 50. Sales Document Editor

Quotation/Proforma documents should provide an editable document editor for permitted fields.

Editable fields include:

- Quotation No.
- Quotation Date
- Valid Until Date
- Customer Name
- Customer Mobile
- Company Name
- GST Number
- Billing Address
- Shipping Address
- Terms and Conditions
- Product lines
- Quantity
- Pricing
- Discount
- Tax

Generated documents can be printed/downloaded/shared.

---

## # 51. B2B & Institutional Sales Workflow

### ### Educational Institutes

```
``` text
Quotation
  ↓
Approval
  ↓
Purchase Order
  ↓
Supply / Payment
  ↓
Tax Invoice
```
```

### ### Government / Tender Orders

```
``` text
Quotation
  ↓
```

Proforma Invoice

Payment / PO

Tax Invoice

...

The platform should preserve document history and relationship between quotation, proforma invoice, order and tax invoice.

52. Admin Panel

The Admin Panel will provide centralized management.

Main Admin Menu

Dashboard
Products
Categories
Brands
Inventory
Purchases
Suppliers
Orders
Customers
Walk-in
Sales Documents
Shipping
Coupons & Offers
Rewards
Learning Hub
Services
CMS
Support Tickets
WhatsApp
Notifications
Sales Executives
Incentives
Reports
Analytics
Stores
Users & Roles
Settings

53. Admin Dashboard KPIs

Dashboard should show:

- Total Revenue
 - Total Orders
 - Online Orders
 - Walk-in Orders
 - B2B Orders
 - B2C Orders
 - GST Collected
 - Average Order Value
 - Total Customers
 - New Customers
 - Out-of-stock Products
 - Low-stock Products
 - Sales by Store
 - Sales by Category
 - Sales by Executive
 - Gross Profit
 - Net Profit
 - Pending Payments
 - Pending Shipments
 - Pending Returns/Refunds
-

54. Admin Sales Dashboard Filters

Filters:

Date Range

- ☐ Today
- ☐ Yesterday
- ☐ This Week
- ☐ This Month
- ☐ This Year
- ☐ Custom Date Range

Category

Subcategory

Product

Store

Sales Channel

Customer Type

Sales Executive

Payment Method

55. Category-Wise Sales Report

Example:

Robotics Kits
₹1,25,000

Drone Technology
₹2,80,000

Arduino & IoT
₹95,000

STEM Kits
₹60,000

Admin can instantly identify the strongest business segment.

Report metrics:

- Revenue
- Quantity sold
- Orders count
- Average order value
- Profit
- Margin

56. Subcategory-Wise Sales Report

Example:

Drone Technology
├── Flight Controllers
├── Motors
├── ESC
├── GPS Modules
├── Batteries
└── Propellers

Each subcategory can show:

- Revenue

- Quantity Sold
 - Orders Count
 - Profit
 - Margin
-

57. Product-Wise Sales Report

Example:

Arduino UNO R3
Sales: ₹52,000
Qty: 104

Pixhawk 2.4.8
Sales: ₹85,000
Qty: 34

Raspberry Pi 5
Sales: ₹1,20,000
Qty: 24

Additional metrics:

- Revenue
 - Quantity
 - Orders
 - Purchase cost
 - Shipping cost
 - Gross profit
 - Net profit
 - Profit %
-

58. Report Export

Reports should support:

- Export PDF
- Export Excel
- Export CSV
- Print Report

Exports should respect selected filters.

59. Order Management -- Admin

Admin can:

- View all orders
- Search orders
- Filter orders
- View order source
- View store
- View customer
- View sales executive
- Order status
- Payment status
- Shipping status
- View invoice
- Shipping details
- Cancel order
- Refund
- Return
- Replacement
- Add internal notes
- View profit details based on permissions

60. Order Attribution

Every sale should capture the sales executive where applicable.

Example:

Order No: ORD-1054

Customer: BIT Mesra

Sales Executive: Abhishek Kumar

Order Value: ₹52,000

Order attribution applies to:

- B2B sales
 - Walk-in sales
 - Sales-assisted orders
 - Other manually attributed orders
-

61. Sales Executive Management

Admin can create/manage sales executives.

Executive profile can contain:

- Name
- Mobile
- Email
- Employee code
- Role
- Store/location
- Target
- Incentive rules
- Active/inactive status

Every applicable sale can be assigned to one executive.

62. Executive Performance Dashboard

Example:

Abhishek Kumar

Revenue: ₹5,20,000

Orders: 45

Customers: 32

...

Dashboard metrics:

- Total sales
 - Number of orders
 - Number of customers
 - Average order value
 - Profit generated
 - Incentive earned
 - Target
 - Achievement %
-

63. Sales Leaderboard

Monthly ranking:

1. Shahnawaz Abbas

₹5,20,000

2. Emraan Hassan

₹3,75,000

3. Jay Prakash

₹2,90,000

Leaderboard can be filtered by:

- Month
 - Quarter
 - Year
 - Store
 - Category
-

64. Executive Incentives Module

The database and rules engine should support configurable incentives.

Incentive Types

``` text

- Percentage Based
- Fixed Amount Per Sale
- Category-wise Incentive
- Product-wise Incentive
- Profit-based Incentive
- Slab/Tier-based Incentive

```

Category/Product Example

``` text

Drone Products = 5%  
Arduino Products = 3%  
STEM Kits = 2%

```

Slab Example

``` text

₹0 – ₹50,000 = 2%  
₹50,001 – ₹1 Lakh = 3%

Above ₹1 Lakh     = 5%  
...

---

## # 65. Executive Target Dashboard

Example:

``` text

This Month Sales
₹2,50,000

Target
₹3,00,000

Achievement
83%

Incentive Earned
₹8,750

Pending Incentive
₹2,500
...

66. Incentive Reports

Filters:

- Date Range
- Executive
- Store
- Category
- Product
- Customer Type
- Revenue

Columns:

- Executive
- Revenue
- Incentive %
- Incentive Amount
- Paid Status

67. Incentive Payout Tracking

Example:

Incentive Earned = ₹15,000

Paid = ₹10,000

Pending = ₹5,000

...

Payout records should contain:

- Amount
- Date
- Payment reference
- Paid by
- Status
- Notes

68. Profit-Based Incentive Formula

For profit-based incentive:

Profit =

Selling Price

-

Purchase Price

-

Shipping Cost

-

Additional Charges

...

Example:

Arduino UNO

Purchase Price = ₹250

Selling Price = ₹400

Profit = ₹150

Commission = 5% of ₹150

Commission = ₹7.50

...

The final calculation must be based on the configured incentive rule and eligible profit.

69. Order Profit Dashboard

Profit information should be visible only to authorized roles such as:

- Admin
- Store Manager

Order details can show:

Order No.

Selling Price
Purchase Cost
Shipping Cost
Additional Charges
Gross Profit
Net Profit
Profit %

Example:

Order Value ₹10,000
Purchase Cost ₹7,000
Shipping ₹500
Net Profit ₹2,500
Margin 25%
'''

70. Sales Person Profit Tracking

Example:

Sales Executive: Emraan Hassan

Monthly Sales
₹5,00,000

Generated Profit
₹1,50,000

Incentive
5%

Commission
₹7,500

71. Profit Dashboard Filters

Admin/Store Manager can filter:

- Date Range
- Sales Executive
- Store
- Category
- Subcategory
- Product
- Customer
- B2B
- B2C
- Walk-in
- Online

72. Profit Sharing Settings

Admin can define role-based profit-sharing rules.

Example:

Intern
5% of Profit

Sales Executive
7% of Profit

Store Manager
2% of Profit

Custom rules can be configured.

The system should preserve the rule applied at the time of calculation so historical reports remain auditable.

73. Customer Management

Admin can:

- View customers
- Search customers
- Customer order history
- Customer spending
- Addresses
- Account status
- Customer type
- B2B details
- Customer enquiries
- Wishlist insights
- WhatsApp enquiries
- Reward points
- Community opt-in status
- Sales executive attribution

74. WhatsApp Module

Customer Notifications

WhatsApp notifications can cover:

- Successful order confirmation
- Payment confirmation
- Order shipped with tracking details
- Delivery notification
- Availability enquiry
- Customer support

Admin Configuration

Admin can configure:

- WhatsApp number
- API credentials
- Message templates
- Availability message
- Support message
- Order notification templates
- Campaign messages

WhatsApp Enquiry Records

Admin can see:

- WhatsApp enquiry
- Product requested
- Customer name
- Mobile number
- Product SKU
- Enquiry timestamp
- Enquiry status

Automated WhatsApp notifications should use the applicable WhatsApp Business Platform/API and approved templates where required.

75. Email Notifications

Email events can include:

- Registration
- Order confirmation
- Payment confirmation
- Invoice
- Shipping
- Delivery
- Password reset
- Quotation
- Proforma invoice
- Support ticket updates

76. Push Notifications

Flutter application can receive:

- New offers
- Order confirmation
- Order shipped
- Out for delivery
- Delivered
- Payment updates
- Back in stock
- Price drop
- Promotional campaigns
- Learning Hub updates

- Workshop updates
 - Internship updates
-

77. Reviews & Ratings

Customers can:

- Give star rating
- Write review
- Upload product images
- Upload videos
- Edit review
- Report review

Admin can:

- Approve/reject
 - Moderate content
 - Feature reviews
 - Remove inappropriate content
-

78. Coupons & Offers

Admin can create:

- Percentage discounts
 - Flat discounts
 - Category-based offers
 - Product-specific offers
 - Brand offers
 - Minimum-order discounts
 - First-order discount
 - Coupon codes
 - Limited-use coupons
 - Expiry dates
 - User-specific coupons
 - Customer-type coupons
 - Store-specific promotions
 - Walk-in-specific promotions
-

79. CMS

Admin-managed content:

- Homepage banners
- Promotional banners
- About Us
- Contact
- FAQs
- Shipping policy
- Return policy
- Privacy policy
- Terms & Conditions
- Blog
- Learning Hub
- Services
- Careers
- Important notification slider

80. Mobile Application -- Flutter

The Flutter application will provide a mobile-first shopping experience rather than simply copying the website.

Mobile Home

- Promotional banners
- Search
- Categories
- Featured products
- Trending products
- Deals
- New arrivals
- Recommended products
- Recently viewed
- Quick category navigation
- Notification slider

Bottom Navigation

```
``` text
Home | Categories | Search | Cart | Account
```
```

81. Mobile Features

- Login/register
 - OTP login
 - Google login
 - Product search
 - Filters
 - Product details
 - Wishlist
 - Cart
 - Checkout
 - Payments
 - Orders
 - Tracking
 - Reviews
 - Notifications
 - WhatsApp support
 - Offers
 - Profile
 - Addresses
 - Invoice downloads
 - Reward points
 - Support tickets
-

82. Mobile-Specific Features

- Product sharing
 - WhatsApp sharing
 - Native image optimization
 - Fast product loading
 - Offline caching
 - Recently viewed products
 - Persistent cart
 - App update notification
 - Android support
 - iOS support
-

83. Store / Inventory Quick Management Mobile App

A dedicated backend/store-management mobile interface is required so authorized users can perform inventory operations from anywhere.

Purpose

The app/interface will allow authorized Admin/Store Manager users to:

- Quickly search products
- View stock
- Check location-wise inventory
- Add/update inventory
- Perform stock adjustments
- Record purchase entries
- View purchase history
- Check product cost
- Check selling price
- View low-stock items
- Update stock quickly
- View product details
- Scan/search SKU where supported

Security

Access must be role-based and protected with secure authentication.

Store Managers should only access the stores and functions permitted to them.

84. Store Management

Admin can create and manage:

- Store name
- Store code
- Address
- Contact
- Location
- Store status
- Store staff
- Store manager
- Authorized devices/tablets
- Store inventory
- Store-specific settings

Future stores can be added without redesigning the inventory architecture.

85. Store-Wise Reporting

Ranchi

- Website sales
- Mobile App sales
- Ranchi walk-in sales

Patna

- Patna walk-in sales

Delhi

- Delhi walk-in sales

And so on for future locations.

Management can compare:

- Revenue
- Orders
- Profit
- Inventory
- Category performance
- Executive performance

86. Inventory Reports

Reports include:

Overall Inventory

Total stock across locations.

Location Inventory

Stock at each store.

Low Stock Report

Products approaching the minimum threshold.

Out-of-Stock Report

Products with zero available stock.

Stock Movement

Transfers between locations.

Sales-Based Stock Movement

Stock deducted through:

- Website
 - Mobile App
 - Walk-in
 - Other sales channels
-

87. Customer Data & Community Database

The platform should maintain a centralized customer profile containing:

- Customer details
- Customer type
- Order history
- Store history
- B2B information
- GST information
- Reward points
- Wishlist
- Support tickets
- WhatsApp enquiry history
- Community opt-in status
- Marketing consent/status
- Sales executive relationship

The database can be segmented for future campaigns.

88. B2B Invoice Support

B2B customers can provide:

- Company Name
- GSTIN
- Company Address
- Contact Person
- Email
- Billing Address
- Shipping Address

B2B invoices should display applicable company and GST information.

B2B orders can be identified separately in reports.

89. Order Sources & Attribution

Every order should maintain structured attribution.

Possible Sources

- Website
- Mobile App
- Walk-in
- B2B
- Sales Executive
- Store
- Other configured channels

Example:

```
``` text
Order ID: ORD-1054
Source: WALK-IN
Store: Ranchi
Customer Type: B2B
Sales Executive: Abhishek Kumar
Payment: Split
```
```

This enables accurate business reporting.

90. Online + Walk-in Inventory Flow

Ranchi

```
``` text

↓  
Community Opt-In  
```

94. Quotation to Invoice Flow

Customer Enquiry
↓

95. Shipping Decision Flow

If any product blocks air freight:

Air Freight = Disabled
Surface Freight = Available

96. Notification Architecture

Order Events

Relevant events can trigger:

- Push
- Email
- WhatsApp

The exact communication channel can be configured according to notification rules and third-party API requirements.

97. SEO

Because Prayog India has a large product catalogue, SEO will be a major development consideration.

Technical SEO

- SSR/SSG with Next.js
- SEO-friendly URLs
- Dynamic metadata
- Product schema
- Organization schema
- Breadcrumb schema
- Review schema
- Sitemap
- Robots.txt
- Canonical URLs
- Open Graph

- Breadcrumbs
- Image optimization
- WebP/AVIF
- Internal linking

Product SEO

Every product should support:

- SEO title
- Meta description
- SEO slug
- Keywords
- Structured data
- Canonical URL

Category pages should also support configurable SEO metadata.

98. Performance & Media Optimization

The system should be designed for a large product catalogue.

Recommended practices:

- Server-side rendering/static generation where appropriate
- CDN
- Image optimization
- WebP/AVIF
- Lazy loading
- Responsive image sizes
- Product search engine
- Redis caching
- Optimized database queries
- Pagination/infinite loading where appropriate
- Object storage for media
- Background processing for large media/import operations

99. Backend Architecture

Web

- Next.js
- TypeScript
- Tailwind CSS

- Shadcn/UI
- Framer Motion

Mobile

- Flutter
- Dart

Backend

- NestJS
- Node.js
- REST API

Database

- PostgreSQL

ORM

- Prisma

Cache

- Redis

Search

- Elasticsearch / OpenSearch

For a large catalogue, a dedicated search engine is recommended instead of relying entirely on PostgreSQL search.

100. Infrastructure

Recommended:

- AWS / VPS
- Cloudflare
- CDN
- Object Storage
- PostgreSQL
- Redis
- Elasticsearch/OpenSearch
- Automated backups
- Monitoring

- Error logging
- CI/CD

File Storage

Product:

- Images
- Videos
- Datasheets
- Manuals

should be stored using cloud/object storage rather than directly on the application server.

101. Security

- HTTPS
- JWT authentication
- Refresh tokens
- Role-based access control
- Admin permission management
- API validation
- Rate limiting
- SQL injection protection
- XSS protection
- CSRF protection where applicable
- Secure payment integration
- Secure webhook validation
- Admin activity logs
- Database backups
- Secure file upload validation
- Store/device authorization
- Permission-controlled profit data
- Audit logs for inventory and financial changes

102. Admin Roles & Permissions

Super Admin

Full access.

Product Manager

- Products
- Categories
- Inventory-related product fields

Store Manager

- Store inventory
- Walk-in sales
- Stock adjustment
- Purchases
- Store reports
- Profit dashboard where authorized

Order Manager

- Orders
- Shipping
- Returns

Customer Support

- Customers
- Support
- Enquiries
- WhatsApp

Content Manager

- Banners
- Pages
- Blogs
- Learning Hub
- Services

Accounts

- Payments
- Invoices
- Refunds
- Financial reports

Sales Executive

- Assigned customers
- Assigned orders
- Sales dashboard
- Targets
- Incentive dashboard

Permissions should be configurable and restricted by store/function where required.

103. Audit & Activity Logs

Critical actions should be logged.

Examples:

- Product price change
- GST change
- SKU change
- Stock adjustment
- Purchase entry
- Stock transfer
- Order status change
- Refund
- Invoice modification
- Incentive rule change
- User permission change
- Store/device assignment

Audit records should include:

- User
 - Action
 - Previous value where applicable
 - New value
 - Date/time
 - IP/device context where appropriate
-

104. Analytics

Dashboard should provide:

- Sales
- Orders
- Revenue
- Customers
- Average order value
- Product performance
- Category performance
- Best sellers

- Low sellers
 - Inventory
 - Coupon usage
 - Store performance
 - Executive performance
 - Profit
 - Margin
-

105. Business Reports

Reports should cover:

Sales

- Overall sales
- Store-wise sales
- Channel-wise sales
- B2B/B2C sales
- Walk-in sales
- Executive sales

Inventory

- Stock
- Low stock
- Out of stock
- Stock movement
- Purchase history
- Stock valuation

Product

- Product sales
- Category sales
- Subcategory sales
- Brand sales
- Product profitability

Financial

- Revenue
- GST
- Purchase cost
- Shipping cost
- Profit
- Margin

- Incentives
- Incentive payouts

Customers

- Customer growth
 - Repeat customers
 - Customer type
 - Spending
 - Reward points
 - Community opt-ins
-

106. Customer Support / Tickets

Support module should provide:

- Create ticket
- Ticket number
- Customer
- Order reference
- Product reference
- Category
- Priority
- Status
- Messages/replies
- Attachments where applicable
- Assigned support user
- Resolution notes

Statuses:

- Open
 - In Progress
 - Waiting for Customer
 - Resolved
 - Closed
-

107. Order Returns, Refunds & Replacements

Customer can request where applicable:

- Return
- Replacement
- Refund

Admin can manage:

- Request
- Reason
- Eligibility
- Approval/rejection
- Pickup/shipping
- Refund
- Replacement shipment
- Status
- Internal notes

Inventory should be adjusted based on the actual return/replacement outcome.

108. Payment Management

Online payment integration will support the selected gateway, such as Razorpay.

The system will maintain:

- Payment ID
- Order ID
- Amount
- Gateway
- Payment method
- Status
- Transaction reference
- Refund status
- Timestamp

Walk-in payments will additionally support:

- Cash
- UPI
- Card
- Bank Transfer
- Split Payment

Split payments must maintain individual payment components.

109. Invoice & Document Management

Generated documents can include:

- Tax Invoice
- Proforma Invoice
- Quotation
- Credit/Refund documents where required

Documents should have:

- Unique numbering
- Date
- Customer information
- GST information
- Item details
- Tax details
- Payment details
- Store information
- Terms and conditions

110. Notification Slider & System Announcements

Admin can publish global notices without requiring a code deployment.

Examples:

- Maintenance
- Shipping delays
- Store holidays
- Festival offers
- Delivery restrictions
- Important product announcements

Notifications can be shown on:

- Website
- Mobile App
- Admin dashboard where appropriate

111. Recommended Final Technology Stack

Module	Technology
Web	Next.js + TypeScript

UI	Tailwind CSS + Shadcn/UI
Animations	Framer Motion
Mobile	Flutter
Backend	NestJS + Node.js
Database	PostgreSQL
ORM	Prisma
Cache	Redis
Search	Elasticsearch / OpenSearch
Authentication	JWT + OTP + Google Login
Payment	Razorpay / Required Gateway
Shipping	Shiprocket / Delhivery / Xpressbees
WhatsApp	WhatsApp Business Platform/API
Notifications	Firebase FCM
Storage	AWS S3-compatible Object Storage
CDN	Cloudflare
Analytics	GA4 + Search Console
Admin	Next.js
Store Management	Secure Web/Mobile Store Interface
Deployment	AWS/VPS + CI/CD

112. Core Database / Business Entities

The backend should be designed around entities such as:

- Users
- Customers
- Customer Types
- Roles
- Permissions
- Stores
- Store Devices
- Products
- Product Variants
- Categories
- Subcategories
- Brands
- Product Attributes
- Product Documents
- Product Media
- Location Inventory
- Stock Transactions
- Stock Adjustments
- Stock Transfers
- Suppliers
- Purchase Entries
- Purchase Items

113. Critical Business Rules

1. **Ranchi Main Branch is the central inventory for Website, Mobile App and Ranchi Store.**
2. **Every future physical store has independent inventory.**
3. **Product catalogue is centralized; inventory is location-specific.**
4. **Walk-in orders must be tied to an authorized store/device.**
5. **Walk-in orders must record the store and order source.**
6. **B2B invoice details are collected when required.**

7. ****Split payments must be supported.****
 8. ****Reward points can be applied during checkout according to configured rules.****
 9. ****Customer-type promo codes must be supported.****
 10. ****Free standard delivery applies over ₹2,000 subject to configured serviceability/rules.****
 11. ****Standard shipping target is 7--10 days, subject to serviceability and operational conditions.****
 12. ****Ranchi City delivery can target 24 hours subject to stock and serviceability.****
 13. ****Faster delivery can be chargeable and based on weight/freight mode/serviceability.****
 14. ****Product weight must be available for shipping calculations.****
 15. ****Products can define allowed freight modes.****
 16. ****Battery/restricted products must be prevented from Air Freight where configured.****
 17. ****If a mixed cart contains an Air-restricted product, Air Freight must be disabled for the order.****
 18. ****Shipping rates must consider weight, zone, courier and mode.****
 19. ****Every sale can be attributed to a Sales Executive where applicable.****
 20. ****Executive incentives must support configurable rules.****
 21. ****Profit-based incentive calculation must consider purchase price, shipping and additional charges.****
 22. ****Profit dashboards must be permission restricted.****
 23. ****Purchase history must be retained for cost analysis.****
 24. ****Bulk price, discount, GST and SKU updates must support category/subcategory filtering.****
 25. ****Quotation can be converted to Proforma Invoice.****
 26. ****Payment can lead to Tax Invoice generation.****
 27. ****WhatsApp notifications must use appropriate business messaging/API mechanisms.****
 28. ****Community communication should be based on customer opt-in/consent.****
 29. ****Critical inventory, pricing, financial and permission changes should be audited.****
 30. ****The platform must be architected for future store expansion without redesigning the core inventory system.****

120. Business Benefits

The proposed platform will provide Prayog India with:

- One centralized product catalogue
- One unified e-commerce platform
- Website + Android + iOS
- Integrated physical-store sales
- Central Ranchi inventory
- Independent future-store inventory
- Store-to-store stock transfer
- Large catalogue search
- Advanced product filtering
- Bulk catalogue operations

- Purchase cost history
- B2B invoicing
- Quotations and Proforma Invoices
- Tax invoice generation
- Split payments
- Rewards and loyalty
- Customer-type promotions
- Automated shipping restrictions
- Battery shipment protection
- Weight-based shipping
- WhatsApp notifications
- Community customer database
- Sales executive attribution
- Executive performance tracking
- Configurable incentives
- Profit-based commission
- Category/subcategory/product reporting
- Store-wise reporting
- B2B/B2C reporting
- Strong SEO foundation
- Scalable backend architecture
- Mobile inventory management
- Role-based security
- Auditability

121. Final System Architecture

122. Final Inventory Architecture

Final Principle

****Online Order → Ranchi Inventory****

****Ranchi Walk-in → Ranchi Inventory****

****Patna Walk-in → Patna Inventory****

****Delhi Walk-in → Delhi Inventory****

****Stock Transfer → Admin-controlled movement between locations****

****Product Catalogue → Centralized****

****Inventory → Location-specific****

****Sales → Attributed by channel/store/customer type/executive where applicable****

123. Scope Completion Statement

This document consolidates the previously defined Prayog India e-commerce scope with the newly requested:

- Website menu structure
- Services
- Careers
- Account structure
- Registration/login options
- Google and OTP login
- Walk-in customer flow
- B2B walk-in invoice details
- Walk-in POS payment methods
- Split payment
- Invoice generation and sharing
- PRAYOG INDIA Community opt-in
- Sales Documents
- Quotation
- Proforma Invoice
- Tax Invoice
- Sales reporting
- Category/subcategory/product reports
- Admin dashboard KPIs
- Bulk product management
- Purchase management
- Supplier management
- Purchase price history
- Cost/margin analysis
- Customer-type promotions
- Rewards/loyalty points
- Delivery rules
- Weight-based shipping
- Air/surface freight rules
- Battery restrictions
- Mixed-cart shipping validation
- Shipping tags
- WhatsApp notifications
- Website notification slider
- Mobile inventory management
- Sales executive attribution
- Executive dashboards
- Sales leaderboard

- Incentive management
- Profit-based incentives
- Order profit dashboard
- Sales-person profit tracking
- Profit sharing settings
- Related products
- Existing e-commerce functionality
- Multi-store inventory
- Store walk-in architecture
- Stock transfer
- SEO
- Security
- Analytics
- Infrastructure
- Complete technical architecture

The resulting platform is intended to operate as a **complete omnichannel e-commerce, retail/POS, inventory, B2B sales, procurement, logistics, CRM/customer, reporting and sales-performance management system for Prayog India**, while remaining scalable for future stores and additional business channels.
